CLRM-2038S

INFRARED RECEIVER MODULE

Description

The CLRM-2038S is miniaturized infrared receivers for remote control and other applications requiring improved ambient light rejection.

The separate PIN diode and preamplifier IC are assembled on a single leadframe.

The epoxy package contains a special IR filter.

This module has excellent performance even in disturbed ambient light applications and provides protection against uncontrolled output pulses.

Features

- · Photo detector and preamplifier in one package .
- · Internal filter for PCM frequency.
- · High immunity against ambient light.
- · Improved shielding against electric field disturbance.
- 3.0V or 5.0V supply voltage; low power consumption.
- · TTL and CMOS compatibility.
- Suitable transmission code:NEC code,RC5 code.

Applications:

- 1. Optical switch
- 2. Light detecting protion of remote contol
 - AV instruments such as Audio, TV, VCR, CD, MD, DVD, etc.
 - · Home appliances such as Air-conditioner, Fan, etc.
 - · CATV set top boxes
 - · Multi-media Equipment
